DETAILED ACTION

The following is a first action on the merits of application Serial No.10/730,461, filed December 8, 2003.

Information Disclosure Statement

Receipt is acknowledged of the Information Disclosure Statement filed February 19, 2004. The cited documents have been considered.

Drawings

The replacement sheet of drawings showing changes to Fig. 4 was received on May 14, 2004. Substitution of the replacement sheet is approved.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 24-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ring et al.(739) in view of Dunkelw('192). The Ring et al. device is a pressure actuated brake that in use would inherently involve performing the steps of selectively supplying a pressurized fluid to a low pressure side of pressure intensifier 30, selectively supplying magnified pressure from the high pressure side of the pressure intensifier to a piston of cylinder means 40, and engaging a brake with the piston to interconnect two relatively rotating members. The Ring et al. device would lack the step of "engaging the clutch" since it is a brake actuator. Clutches and rakes are so closely related that a person having ordinary skill in the art would have found it obvious to apply the Ring et al. arrangement to a clutch actuator, such as that of Dunkelw, a pressure actuated clutch. It is conventional to provide pressure regulation in fluid pressure systems. Thus recitation of the step of maintaining a desired pressure range would not patentably distinguish over Ring et al. Note that reservoir tank 20 of Ring et al. would constitute a pressure accumulator.

Allowable Subject Matter

Claims 1-23 are allowed.

Claims 29 and 30 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Suzuki et al.(US 2002/0162722 A1), Kobayashi('086), Kato('663), Porter('787), and Porter('774) show fluid actuated clutches in transfer cases in four-wheel drive vehicles.
